## **TECHNICAL DIRECTION MEMORANDUM (TDM) #01**

**WA # 067-RDRD-B5Y7**

**WAF Revision # 01**

**October 29, 2010**

### **Background**

The current SOW provides for the collection of samples from the potentially contaminated buildings. About 15 buildings are located on the 132 acre property referred to as Eagle Zinc Site. These buildings are associated with significant residue, which can be found inside and around the buildings. The current work plan does not include samples from the building structures. These samples are necessary to ensure that the building materials are not RCRA hazardous or highly contaminated. This is important to know because the building debris will be placed in an on-site containment cell and hazardous debris must be dealt with differently. These additional 30 samples will be tested for site specific metals and TCLP metals. These samples will be covered under the current budget for WA- 067.

### **Task 3 - Field Investigation/Data Acquisition**

This action authorizes the contractor to perform the following activities with regard to the Eagle Zinc Site:

- Collection of 30 samples from the building materials
- Sample analysis for site-specific metals and TCLP metals
